

Buse Tasdemir

busetasdemir174@gmail.com

EDUCATION:

Politecnico di Torino | Turin, Italy

Expected Graduation: July 2026

Bachelor of Science in Computer Engineering | GPA: **79.35/110**

[LinkedIn](#) | [GitHub](#) | [Personal-WebSite](#)

EXPERIENCE:

Drink International S.p.A. · Torino, Italy

April 2026 – June 2026

Data Automation Intern

- Built an end-to-end order ingestion pipeline in n8n that intercepts incoming client emails, extracts structured order data via Gemini LLM, generates purchase-order PDFs through Gotenberg, and pushes them directly into the ERP — zero manual intervention.
- Engineered a Python (openpyxl) script to auto-generate protected Excel order templates from live ERP database exports, enforcing strict input constraints so agents can only modify prices and quantities.

D.A.R.T. (Digital Art Research Team) | Torino, Italy

Co-Sub Tech Leader & Front-End Developer

October 2024 – Present

- Co-lead the technical sub-team by coordinating web development tasks, managing project timelines, and collaborating with a multidisciplinary student group

Reply | Torino, Italy

Reply Ambassador

April 2024 – Present

- Represent the company across the Politecnico di Torino campus, acting as a direct liaison between the engineering student body and Reply's talent acquisition team
- Promote international tech competitions, such as the Reply Code Challenge and Cyber Security Challenge, to peers in order to foster a culture of innovation and coding excellence
- Collaborate with recruiters and fellow ambassadors to organize campus events, enhancing employer branding and technical engagement

ACADEMIC PROJECTS:

D.A.R.T. (Digital Art Research Team)

Front-End Developer / Member

October 2024 – Present

- Collaborated with a peer developer to build and deploy a responsive, multi-page promotional website for a digital art research group.
- Engineered the "About Us" and "FAQ" web pages from scratch using semantic HTML and CSS to ensure cross-device compatibility and clean UI design, including dynamic accordion menus for the FAQ section, utilizing JavaScript to enhance the overall user experience.
- Managed version control and deployed the final static production build utilizing Git and GitHub Pages.

Drink Int. Enterprise Network Topology

April 2026 - June 2026

Reverse-Engineered Architecture Project

- **Reverse-engineered and simulated** a production enterprise campus network observed during an industry internship, designing a high-availability triangle topology at the core and distribution layers.
- **Engineered optimal routing and redundancy** utilizing Single-Area OSPF (Area 0) for sub-second route convergence and HSRP for seamless first-hop virtual gateway failover.

- **Segmented network traffic** across 5 functional departments (Corporate Data, Engineering, Server Farm, IoT, and VoIP) using IEEE 802.1Q VLAN tagging and auxiliary Voice VLAN mapping.
- **Optimized backbone infrastructure** by implementing LACP EtherChannel for bandwidth aggregation and link-level fault tolerance.
- **Validated end-to-end connectivity** to a simulated ISP edge, confirming full DR/BDR synchronization, HSRP preempt operations, and logical interface bundling.

SKILLS:

Language: Turkish (Native), English (B2 - Fluent), Italian (A2 - Basic conversational)

Networking: IP Addressing, Routing, Switching, TCP/IP, Subnetting

Automation: n8n, IUNGO, AI Agents/LLMs.

Computer & Programming: C, Java, Python, Matlab, JavaScript, HTML, CSS, Git, GitHub, Oracle SQL server, Microsoft Offices (Word, Excel, PowerPoint), Figma, LaTeX
